

1. Frontend Software Engineer

Veridise is a blockchain security company founded by a team of world-class researchers. We are passionate about bringing our state-of-the-art security research and software analysis tools to the fingertips of web3 developers.

Veridise is seeking a skilled frontend developer who will be responsible for developing and maintaining a frontend for our SaaS web application. This individual will work closely with Veridise engineers to integrate Veridise security tools into our SaaS platform for public consumption. In addition, this individual will be responsible for collecting feedback from customers to determine how interfaces can be improved to better integrate into their workflow.

Applicants should have a strong background in web development and should be proficient in all aspects of the web development stack.
