

Full Stack Web Developer - PHP & REST APIs

We are a Greek SaaS company with international clients, looking for a full stack web developer to join our development team.

Location:

- Remote or hybrid from Athens.

Main Responsibilities:

- Maintain and enhance existing PHP-based SaaS platforms.
- Design, implement, and consume RESTful APIs for mobile and web applications.
- Collaborate with team members to plan and implement new features.
- (Optional) Assist in building a cross-platform mobile app using .NET MAUI.

Required Qualifications:

- Strong PHP skills (experience with MVC frameworks such as CodeIgniter or similar).
- Excellent knowledge of JavaScript and jQuery (equally important as PHP).
- Solid understanding of REST APIs (both consumption and development).
- Proficient in HTML and CSS for front-end structure and styling.
- Strong knowledge of SQL and experience designing and querying databases in both MSSQL and MySQL.
- Comfortable with Git and collaboration tools (e.g., GitHub, GitHub Desktop).
- Ability to read, understand and improve existing codebases.

Nice to Have:

- Experience with .NET MAUI or Xamarin for mobile app development.
- Familiarity with Windows Server and IIS.
- Experience with SQLite or other local databases.

What We Offer:

- Work on active, real-world SaaS systems.
- Flexible schedule and remote work options.
- Small, agile, and collaborative team environment.
- Continuous learning and hands-on experience.
